FORPRENE[®] Handle Satined finish blade
Sheepfoot shape style - Red+Yellow

ART. FX-447 C FOX ALSR2
FORPRENE[®] Handle Satined finish blade
Clip point style - Red+Yellow

The knives with **FORPRENE[®]** handles are made in the same sizes and using the same materials of the original ALSR model.

The **FORPRENE[®]** handle range is designed to give the user a high quality product, but with a more economical price, compared to the aircraft aluminum and G10 series.

Now, the user has the option of choosing from three different handle materials for the A.L.S.R model.

All the knives are supplied with 1000D cordura sheath and with an extra seat belt blade and a wrench key to can change it.

The knives including L.A.W.K.S.[®] locking system Lake And Walker Knife Safety, designed by noted Knifemaker's Guild members "Ron Lake" and "Michael Walker", into our newer liner-locking folders. When the LAWKS lever is pushed forward with a flick of the thumb, the knife becomes

a virtual fixed blade, and the liner-lock is virtually impossible to release by the most vigorous use until the LAWKS lever is retracted. This provides the user with an added measure of safety.

Each knife includes an extra blade & wrench key kit.
