

Blades: Cobalt vanadium stainless steel N690Co
HRC 58-60 length mm 150 - thickness mm 6.

Handle: Made with high resistant FORPRENE[®] material, an elastopolymer with very high thermal proprieties from -40°C to +150° C, it has very high grip power. The material is also very resistant to salt and acid corrosion and can be used in all wet situations. Total length of the handle is mm 135. Black and NATO green available.

Sheath: Each sheath is made with OD Green or Black ballistic nylon. The sheath has an extra pocket in the front where you can find a place a multi tool or even an extra gun magazine. The sheath is supplied with a leg strap and a belt extender. The modular idea of the sheath gives the possibility to can use it in several positions. In the back side of the sheath there are the MOLLE systems loops that giving you the possibility to attach it to any combat jacket that fit that system.

Blade Coating: It is a special coating that gives to the outside blade a resistance to salt corrosion and increases the outside hardening to HRC 72-75.
This process has been developed for giving to these knives the same features as a high speed tool, resistant to abrasives and very powerful performance.
