KA-BAR[®]

HARDCORE LIVES.
HARDCORE KNIVES.

KA-BAR® Knives, Inc.

Since 1898

About KA-BAR®

We've been making knives since 1898 and each knife undergoes our unique manufacturing processes and testing to ensure corrosion resistance, strength, edge holding ability, and an out-of-the-box razor sharp cutting edge.

Union Cutlery Company - 1909

KA-BAR Cutlery, Inc. - 1952

We wouldn't tell you to buy a KA-BAR® knife because of its military heritage or because it's a legend in the world of knives.

We wouldn't tell you to buy a KA-BAR® because it comes from an American company with more than a century of knife-making experience.

And we wouldn't tell you to buy a KA-BAR® knife because of its resistance to corrosion, tested strength, unmatched edge-holding ability and out-of-the-box razor sharp blade.

Because there's only one real reason to buy a KA-BAR®.

When it comes down to it and you're all alone and your survival depends on a knife, you're going to want a knife you can trust. A knife that won't fail you. A knife that has proven itself time and time again.

You're going to want a KA-BAR®.

How We Got Our Name

Our name dates back to early 1900's from a fur trapper testimonial. He wrote that while trapping, his gun jammed leaving him with only his knife to kill a wounded bear that was attacking him.

He thanked us for making the quality knife that helped him kill a bear, but all that was legible was "K a bar".

Honored by the testimonial, the company adopted the phrase KA-BAR® as their trademark.

KA-BAR Headquarters, Olean New York - 2011

Our Most Famous Knife

Soon after the start of World War II, KA-BAR® submitted a fighting knife to the United States Marine Corps in hopes that it would become general issue to that branch of the military. Soon production was under way on a new and improved fighting / utility knife for the Marines. As the war escalated, the demand for these knives was so great that the KA-BAR® factory alone could not keep up.

The government assigned several knife companies to create similar knives as supplemental pieces for those serving the War. The KA-BAR® knives became so well recognized for their quality and so abundant in number that "Kabar" became the name by which many referred to this knife pattern, regardless of whether the knife was manufactured at the KA-BAR® facility.

KA-BAR branded knife submitted to the U.S. Marine Corps - 1942

STORMING THE BEACH, ENEMY FIRE AND DEFENDING FREEDOM

THAT'S THE KA-BAR LEGEND

KA-BAR®

1217 USMC Fighting/Utility Knife - Blade Length 7"; Overall Length 11-7/8"

Leather Handled Fighting/Utility Knives

MADE IN THE USA

During WWII a legend was born, as several companies were asked by the U.S. Government to help supply troops with combat/utility knives.

KA-BAR® stepped up to the challenge and their reputation became so strong that all who are familiar with this knife refer to any of its kind simply as the "KA-BAR".

The world's most famous fixed-blade knife is still doing its job, with honors, almost 70 years later.

Neither the Department of the Navy nor any other component of the Department of Defense has approved, endorsed, or otherwise authorized this product.

KA-BAR®

OEF Afghanistan Commemorative Fighting/Utility Knife - Blade Length 7"; Overall Length 11-7/8"

Commemorative Fighting/Utility Knives

KA-BAR® applies gold-colored paint to their standard KA-BAR® knives to create intricately detailed works of art meant to honor and commemorate those men and women in uniform who serve our country. Active-duty and retired military personnel will appreciate the thought and care that goes into each of these collectable pieces.

All commemoratives look stunning on display. Your knife will float gracefully on a desktop inside our Dome Presentation Case. For wall mounting, the Walnut Presentation Case carefully cradles your commemorative between a lockable, hinged glass front and a red velour-lined pillow. If you prefer a less traditional display method, our Excalibur Display keeps your knife at the ready for up-close, hands-on viewing.

KA-BAR®

1211 Full Size Black KA-BAR® - Blade Length 7"; Overall Length 11-3/4"

Kraton G® Handled Fighting/Utility Knives

It's tough to argue with the success of the world's most recognizable, time-tested fixed-blade knife so KA-BAR® did what any smart company would do, they didn't change the original design, they expanded upon it.

The high-carbon, non-reflective black blade is epoxy powder-coated and tests prove the finish is more durable than ever. The classic oval shape of the original KA-BAR® remains and has been modernized with a material nearly impervious to sweat, chemicals, water and wear, Kraton G®.

Ethan Becker founded Becker Knife & Tool in the early 1980's and set about designing, manufacturing and selling the industrial-strength tactical and survival knives that he had always wanted for himself. His products, the BK&T line, have gone a long way to making these now popular all-black knives in demand.

Mr. Becker spends as much time as possible in the outdoors testing a variety of equipment and knife designs, and also works to expand his primitive and outdoor skills. He collaborated with KA-BAR® in 2008 and has reintroduced and brought up to date his best selling models.

Color: Black
Sheath: Hard Plastic with metal belt clip
MSRP: \$59.59

The Original TDI Knife was designed by John Benner, founder of Tactical Defense Institute. Designed by an officer with officers in mind, TDI fixed-blade knives are meant to be worn at the off hand and draw like a pistol. In extreme close quarters where a suspect is attempting to take an officer's handgun, the TDI fixed-blades are available as a last defense option. Coupled with friction sheaths, the units easily mount on an officer's pant belt and conceal behind the various gear worn on his duty belt.

TDI Accessories

#1480CLIP
TDI Metal Belt Clip
Fits all TDI fixed blade knives except 1478BP.
Also fits Becker Necker (BK11)
and Eskabar (BK14).
MSRP: \$11.50

New items are noted in bold * "Weight" indicates bulk knife weight in pounds. Does not include sheath or packaging. * cro-van = Chrome Vanadium * CR = Cryogenically quenched stainless steel * Blade thickness of all US made KA-BAR® knives starts at 0.165" unless otherwise noted. Epoxy powder coating may alter thickness +.003 to .006". * Fighting/Utility knives feature 20 degree edge angles. TDI Knives and most folding knives feature 15 degree edge angles.

Caring for Your KA-BAR®

Wipe blades after use with a dry, soft cloth. If knives are exposed to salt water, wash with mild dish detergent, rinse with tap water, then wipe with a dry, soft cloth.

Storing

Treat blade with a light coating of mineral oil before storing in a dry area separate from its sheath. If possible, store in paper sleeve provided with the knife at purchase.

Sharpening

Keep knives sharp by touching up edges as needed. Most KA-BAR® knives can be sharpened using an Arkansas stone or commonly available sharpening system. Most knives can easily be touched up using a coarse or hard stone. When bringing back a very dull edge a coarse or hard stone should be used first, followed by a finer, softer stone.

New items are noted in bold * "Weight" indicates bulk knife weight in pounds. Does not include sheath or packaging. * cro-van = Chrome Vanadium * SS = stainless steel * CR = Cryogenically quenched stainless steel * Fighting/Utility knives feature 20 degree edge angles. TD Knives and most folding knives feature 15 degree edge angles.

* Blade thickness of all US made KA-BAR® knives starts at 0.165" unless otherwise noted. Epoxy powder coating may alter thickness +0.03 to .006". * Fighting/Utility knives feature 20 degree edge angles. TD Knives and most folding knives feature 15 degree edge angles.

Knives made with D2 steel require diamond or ceramic sharpeners. Knives should at no time be sharpened on a belt sander or bench grinder. These machines ruin a factory-sharpened edge.

KA-BAR® Glossary of Terms

1095 Cro-Van Steel
Easy to sharpen, plain carbon steel used in knife making.
Proven to be one of the most popular steels used in KA-BAR® Knives.

440A Steel

A high-carbon stainless steel used in many American production knives.

Clam Pack

A clear plastic packaging option that allows products to be hung on peg boards for retail merchandising.

Cryogenic Quenching (CR)

The process of freezing blades to improve blade performance.

D2 Steel

A high-carbon, high-chrome tool steel often used for blanking dies.
This steel has excellent edge holding ability but is very difficult to process.

Epoxy Powder Coating

A coating process that protects blades from corrosion and also makes them non-reflective.

Flat Ground

A grind that tapers from the top of the blade down to the cutting edge.
Also known as a "V" grind.

Full-Length Tang

Extension of the blade steel that runs completely through the handle to the end of the knife.

Full Tang

A tang that shows all around the handle of the knife between two pieces of handle material.

Game Hook

Also known as a gut hook, this blade shape is best for opening the flesh of game.

Glass-Filled Nylon (GFn-PA66)

Material used to make sheaths. Nylon is reinforced with glass particles and other materials to provide strength and durability while still allowing some flexibility.

G10

An extremely durable material made of woven fiberglass soaked in epoxy resin, then highly compressed and baked.

Guard
Also known as a hilt, is the piece of steel that separates the handle and the blade.
Serves to keep the hand from slipping on the blade when cutting.
Can be single or double.

Hollow Ground

The ground surface of the blade is concave. Used to create a fine cutting edge.

Kraton G® Thermoplastic Elastomer

Referred to simply as Kraton® or Kraton G®, is a man made material resembling rubber that can be molded into knife handles. Provides a non-slip grip.
Trademark of Kraton Polymers Group of Companies.

Lockback

A folding knife that has a lock release on the back of the handle.

Micarta®

A man made material, made by layering resin and cloth. Used to make very fine knife handles. Westinghouse trademark.

Powdered Metal

A process used to make shaped metal pieces. Fine metal particles are molded under pressure and then fused under high heat. Also known as sintered metal.

Reclaimed American Chestnut

Back in the early 1900's, Chestnut blight caused a fungus that eventually killed off three and one half billion American Chestnut trees. KA-BAR® S Traditional Dog's Head Folders are made with handles created from the wood of a deconstructed barn in Hopkinsville, KY, that was primarily framed and sanded before the blight with American Chestnut.

Rockwell Hardness (HRC)

An industry scale used for measuring the hardness of blade steel. The higher the reading, the harder the steel. Written as HRC or RC followed by a range of numbers.

Side Lock

Also known as a linerlock. A locking mechanism that features a tab cut out of the liner which is used as a stop to lock the blade in an open position. To close, the liner tab is pushed back to its original position.

Zytel®

A glass-filled nylon material used in making handles for knives. DuPont trademark.
